ABSTRACT

In a county by county analysis, this report assesses the quality of life for Kentucky's children. Researchers developed a child quotient (CQ) based on 18 indicators: per capita income, children in poverty, women receiving inadequate prenatal care, infant deaths, teens giving birth, substandard dwellings, children in foster care, per-pupil spending, ninth graders' reading level, dropouts, attainment of high school diploma or equivalent by age 25, unemployed 16 to 19 year olds, and children's unmet needs for medical attention, welfare benefits, daycare, food stamps, subsidized school breakfasts, and WIC (Women, Infants, and Children) benefits. The comparative rankings of each of Kentucky's 120 counties on each of the 18 indicators determined county CQs. Only one county, Boone, had a very good CQ. Five counties, McCracken, Marshall, Daviess, Oldham, and Franklin, had good CQs. Seventeen counties had fair CQs; 16 had poor CQs; and 81 had failing CQs. Arranged by area development districts, county entries provide raw numbers percentages, and rankings for the 18 CQ factors, plus data on an additional 14 indicators. The report includes maps, definitions, and a detailed explanation of the sources and methodology used for each indicator. (SV)

Joseph P. Tolan
Vice President, Community Resources
Metro United Way - Louisville

A very special thanks goes to **Ron Crouch**, Director of Planning and Research with Metro United Way of Louisville, Kentucky. His assistance was invaluable in formulating the methodology we employed in computing our data. His assistance, however, does not necessarily imply his endorsement of this book nor is he responsible for any errors it may contain.

We would also like to acknowledge the contribution of countless state employees who courteously and promptly responded to our requests for data.

A final thanks to our two summer interns, **Elizabeth Chandler** and **Courtney Townes** for their help in computing and checking data.

Introduction

From the western tip with its low hills and small farms, to the southern Pennyrile with its limestone caves -- from the riverport city of Louisville to the tobacco fields along the Ohio river bottomlands - from the bluegrass region with its rolling meadows and grazing thoroughbreds to the eastern end with its mountains and coal beds -- this is Kentucky.

A land of geographical diversity, Kentucky has 120 counties. Only two states, Georgia and Texas, have more. Typically, Kentuckians are fiercely loyal to their local community and strongly identify with their home county. This element of local pride provided the impetus for Kentucky Youth Advocates' county analysis, "How Are Kentucky's Children Stacking Up?" We wanted Kentuckians to have information about the county of residence, in particular information about the living condition of children, especially poor children, in their county of residence. We hope our data will encourage Kentuckians to look objectively at the strengths and weaknesses of their communities. While we want local citizens to feel pride when pride is warranted, we also want them to be aware of how their communities may be ignoring the problems of children.

It is not our intent to embarrass counties for their deficiencies. Rather we wish to spark change where change is needed. State funding of programs that serve impoverished children does require legislative action, but citizens elect legislative representatives. We need legislators who share our concern for the welfare of children, who will make children's needs a priority.

Kentucky Youth Advocates hopes that our publication will provoke debate among the citizens of our state, for the data we present is both compelling and alarming. If Kentucky's people are to move forward into the twenty-first century, they must open their eyes to the present, must recognize community problems, and act on the improved quality of life for today's generation of youth.

A wise statesman once said, "If you let the people know, they can act intelligently." Our aim is to let you know, for with knowledge comes power, with power comes change.

Child Quotient (C.Q.)

A QUALITY OF LIFE ASSESSMENT FOR KENTUCKY'S POOR CHILDREN

Kentucky is a beguiling state. Deficient in many respects, Kentucky is also relaxed, folksy, beautiful and charming--an altogether cozy and hospitable place. Such pleasant qualities can lull Kentuckians into a sense of self-satisfaction, causing them to minimize the state's problems.*

In a 1987 Bluegrass poll, 87 percent of Kentuckians polled rated their communities as either good or excellent places to live. But a close look at Kentucky reveals that the lives of impoverished children in many Kentucky communities are in jeopardy. Consider the following statistics: Kentucky ranks second to last nationally in the number of white babies who die before their first birthday. We are rock bottom in our percentage of adults with high school diplomas. Only five states have per capita incomes lower than ours. Such statistics suggest that the satisfaction indicated in the Bluegrass poll reflect more a sense of fierce community loyalty than an informed conviction that Kentucky is a "healthy" state in which to rear children.

Although a wealth of data exists which compares Kentucky to our nation's 49 other states, there is very little data which accesses each county individually. In this publication Kentucky Youth Advocates attempts to fill that void of information by providing statistical information for each of our 120 counties. We also rank each county with respect to 18 indicators in relation to the other 119 counties in our state. We also compute what we refer to as a "child quotient" for all 120 counties.

Kentucky Youth Advocates' child quotient (C.Q.) is based on the following 18 indicators: per capita income, children in poverty, children in financial need of Aid to Families with Dependent Children, women receiving late or no prenatal care, infant deaths, percentage of teens giving birth, medically indigent children, substandard dwellings, children under six potentially needing daycare, children needing food stamps, children needing free or reduced school breakfasts, infants and children needing WIC benefits, children in foster care, per pupil spending, percent of ninth graders reading at grade level, dropouts, persons 25 years or older with high school diploma or equivalency, and unemployed 16 to 19 year olds. We chose to look at these areas because we felt them to be good indicators of the physical, mental, and emotional health of impoverished children.

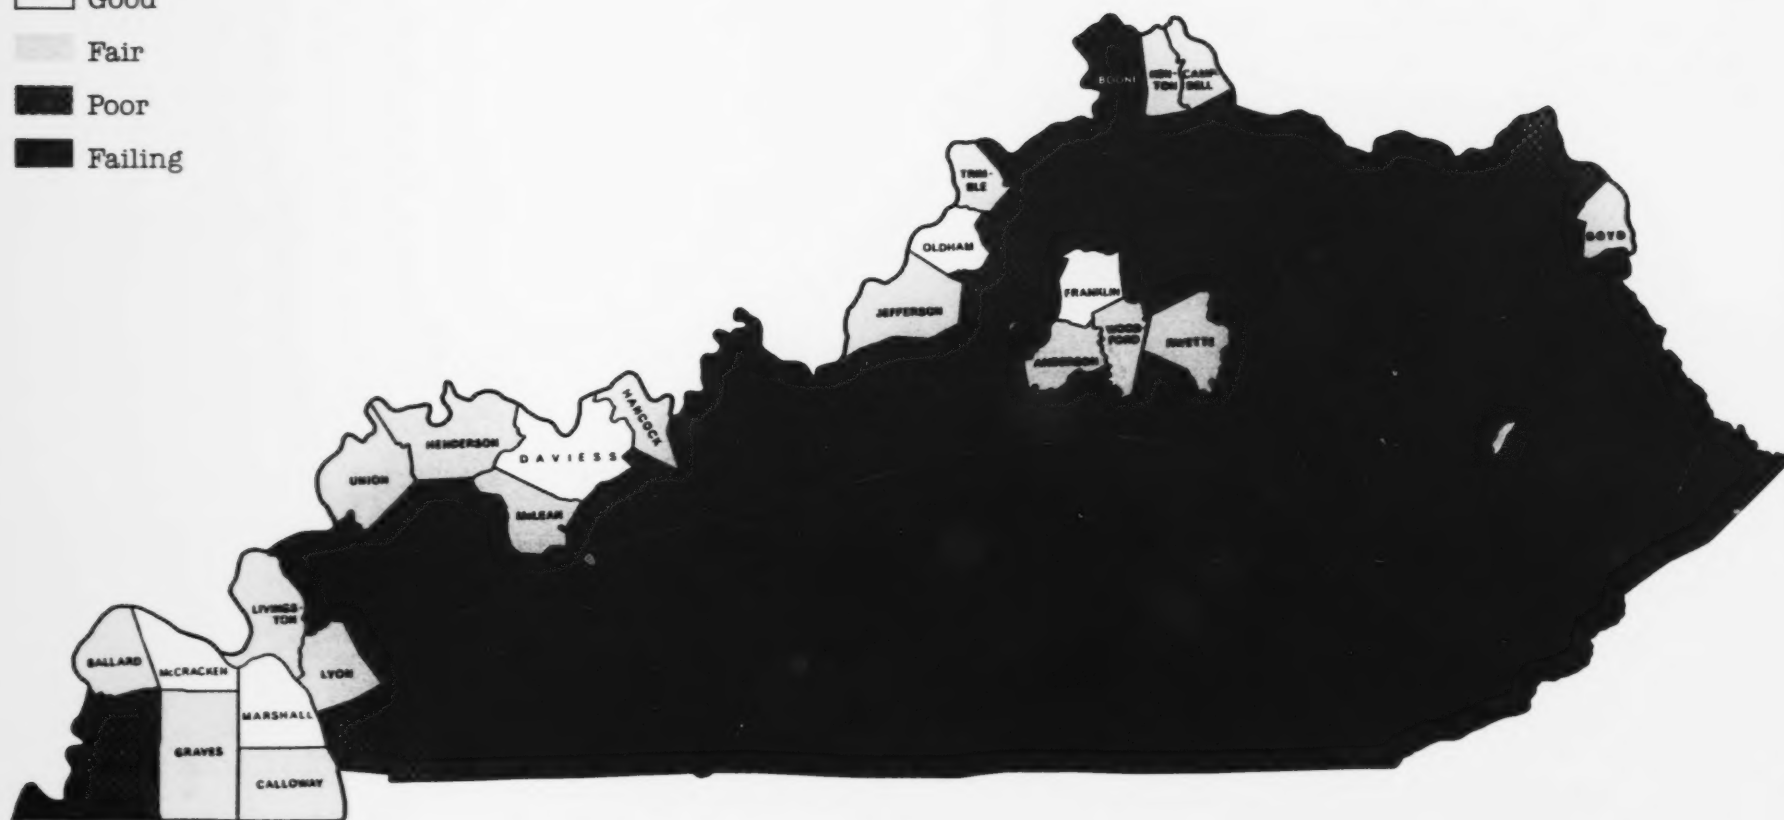

*Art Jester, "Trouble in the Schools: a Kentucky Tradition," *Lexington Herald-Leader*, June 11, 1985.

For each county in Kentucky we arrived at a child quotient (C.Q.). We determined this C.Q. by adding a county's rankings in the 18 areas listed above and then dividing that sum by 18. A county's C.Q. placed it in one of the five following categories: very good, good, fair, poor, or failing. Each category describes the environment in which impoverished children are living.

Counties were rated in much the same way as students are graded in school. However, the highest possible mark was "1" rather than 100. Only one county was rated very good with an average child quotient under 12. A good C.Q. ranged from 12.01 to 24.00. Counties between 24.01 and 36.00 were ranked fair, 36.01 to 48.00, poor. Those with quotients between 48.01 and 120 fell into the failing category.

The following pages list each county and its child quotient from best to worst.

General Methodology

"How Are Kentucky's Children Stacking Up?" looks at 32 indicators of the quality of life for Kentucky's children, particularly poor children, in each of Kentucky's 120 counties. While we describe here in general how we reported data, we would like to call the reader's attention to a more detailed methodology section which begins on page 241 of the report. We advise you to review this section when interpreting our data.

Kentucky Youth Advocates' publication provides data in the following categories: poverty, health care, housing, child daycare, nutrition, child protection, education, and employment.

In each category, we reported both raw numbers and percentages. For example, we recorded the number of poor children in each county as well as the county's percentage of poor children. The percentages enabled us to compare counties by ranking them from 1 to 120. One is the most desirable ranking; 120, the least. Again using poor children as an example, the county with the lowest percentage of poor children was ranked #1 while the county with the highest percentage was ranked 120. In cases in which percentages were identical, we assigned the lowest ranking to equal percentages. If, for example three counties had equal percentages and were tied for a ranking of 18, all three were ranked eighteen. The county with the next higher percentage was then ranked 21. A more detailed methodology section appears near the end of the publication and we advise the reader to review this section when attempting to interpret our data.

Definitions

Aid to Families with Dependent Children Program (AFDC): The Aid to Families with Dependent Children Program provides cash assistance to low-income children and their families based on family size, gross income, and net income. In Kentucky, two-parent families are ineligible except in cases of severe disability.

Child Abuse: Child abuse refers to a condition or situation in which a child's physical or emotional health or welfare is harmed by other than accidental means.

Child Neglect: Child neglect refers to a condition or situation in which a child does not receive adequate care, supervision, food, clothing, shelter, education, or health care.

Children in Poverty: In this report, "children in poverty" refers to those children who live in families with incomes below the poverty guidelines established by the United States Department of Health and Human Services. For a family of four in Kentucky in 1987, the Department defines as poor those with family incomes of less than \$11,200.

Dropouts: In this report, dropouts are defined as those students enrolled in the ninth grade in a particular school district who failed to graduate from that district four years later.

Food Stamp Program: The Food Stamp Program was introduced to increase the food purchasing power of low-income households. Food stamp benefits are available to nearly all households which meet income and liquid assets tests for need. Food stamps are treated like cash by participating retail food stores and are distributed to recipient households on a monthly basis. Stamps may be used for food items only.

School Breakfast Program: The School Breakfast Program provides cash assistance to participating public and private schools that serve meals to children. The program's reimbursement system allows children from households with incomes at or below 130 percent of the poverty level to receive free meals and permits children with incomes between 130 and 185 percent of poverty to receive meals at a reduced rate. Schools' participation in this program is voluntary.

Infant Deaths: Infant deaths are deaths that occur from the time of a live birth up to one year of age. Fetal deaths and still births are not included.

Late Prenatal Care: In this report, late care is defined as prenatal care that begins after the first trimester of pregnancy.

Medicaid Program: The Medicaid Program is a federally-aided, state-operated program of medical assistance for low-income persons who are aged, blind, or disabled, or members of families with dependent children. All children whose families qualify for Aid to Families with Dependent Children are automatically eligible for Medicaid. In addition, children from two-parent families whose incomes are low enough to meet the financial criteria of eligibility for Aid to Families with Dependent Children are also covered by Medicaid.

Medically Indigent Children: In this report, we defined medically indigent children as those children who do not qualify for Medicaid, but whose families have incomes below the federal poverty level. We did not include under this term those children in families with incomes above the poverty level, who have no insurance coverage, and are financially unable to purchase medical care.

Per Capita Income: Per capita income is defined as the total income in a county divided by the total number of persons in the county.

Substandard Housing: Substandard housing refers to those housing units which have both of the following characteristics: (1) The lack of complete plumbing for exclusive use and (2) 1.10 or more persons per room. "Room" in this context includes living rooms dining rooms, kitchens, bedrooms, finished recreation rooms, enclosed porches for year-round use, and lodgers' rooms. "Complete plumbing for exclusive use" consists of hot and cold piped water, a flush toilet, and a tub or shower for the use of the occupants of the unit.

Supplemental Food Program for Women, Infants, and Children (WIC): The Supplemental Food Program for Women, Infants, and Children provides food assistance and nutritional screening to low-income pregnant and postpartum women and their infants as well as to low-income children up to age five. Participants must have incomes below 185 percent of the poverty level and must be considered nutritionally at risk. Under the Child Nutrition Act of 1966, nutritional risk is defined as "detectable abnormal nutritional conditions; documented nutritionally related medical conditions; health impairing dietary deficiencies; or conditions that predispose people to inadequate nutrition or nutritionally related medical problems."

Title XX Subsidized Daycare: Title XX Subsidized Daycare, in the context of this report, is daycare provided either free or at a reduced rate outside a child's home in a state licensed facility. Children whose family incomes are at or below 60 percent of the median income are eligible as well as children who are at risk of abuse, neglect, or exploitation.

Unemployed: In this report we are only looking at the unemployed 16 to 19 year olds who are not enrolled in school. We have counted as unemployed those 16 to 19 year olds who are actively seeking employment as well as those who are "not in the labor force" and may or may not want jobs.

Detailed Methodology

The detailed methodology section describes the means by which we analyzed and recorded the data for each category addressed in this publication. Data for most categories is expressed first in raw numbers, then in percentages, and finally is ranked according to its percentage. However, we ranked only those categories which we included in our child quotient.

We also are including the original source for any data that is not our own.

PER CAPITA INCOME (1983)

Methodology:

1. First, we recorded the per capita income for each county in Kentucky.
2. Then, we ranked each county from 1 to 120 assigning #1 to the county with the highest per capita income.

Source: "Per Capita Money Income, 1983," Urban Studies Center, State Data Center.

FEMALE-HEADED HOUSEHOLDS (1980)

Methodology:

1. First, we recorded the number of female-headed households in each county.
2. Then, we recorded the total number of all types of households in each county.
3. To compute the percentage of female-headed households in each county, we divided the number of female-headed households by the total number of households.

Source: "General Social and Economic Characteristics," 1980 Census of Population, United States Department of Commerce.

CHILDREN IN POVERTY (1984)

Methodology:

1. First, using 1980 Census figures, we recorded the number of children from birth through seventeen years of age in each county.
2. Using Census data again, we then totaled the number of children in poverty from birth through 17 years of age in each county.

3. To compute the percentage of poverty among children in each Kentucky county in 1980, we divided the number of impoverished children in each county by that county's total child population.
4. To update the percentage of poverty in each county, we used the United States Census report of a 30% increase in poverty from the time of the 1980 Census to 1984. We multiplied each county's poverty percentage as calculated in step #3 by .30 and added that number to the 1980 figure to arrive at the county's 1984 poverty percentage.
5. We determined the number of children in poverty in each county in 1984 by adding the number of children in each county in 1984 from birth through seventeen years of age and then multiplying that figure by the county's percentage of poverty as estimated in step #4.
6. Next we computed the percentage of children in poverty in each county in 1984 by dividing the number of impoverished children in a county by the total number of children in the same county.
7. Finally we ranked each county according to its percentage of child poverty. The county with the lowest percentage was ranked #1.

Sources:

1. The 1980 Census of Kentucky, Vol. IV: Detailed Income and Poverty Characteristics, The State, ADDs and Counties, A Special Report of the Urban Studies Center, University of Louisville, Population Research Unit, May 1986.
2. "Population Estimates, 1984," Urban Studies Center, State Data Center.

CHILDREN ON AID TO FAMILIES WITH DEPENDENT CHILDREN (1986)

Methodology:

1. For each county we recorded the number of children in families receiving Aid to Families with Dependent Children (AFDC) benefits in 1986.
2. To determine the percentage of children in each county receiving AFDC, we divided the number of child recipients by the county's total number of children in 1984.

Sources:

1. "P.A. 264," July 1985 - June 1986, Cabinet for Human Resources, Department for Social Insurance.
2. "1984 Population Estimates," Urban Studies Center, State Data Center.

CHILDREN IN FINANCIAL NEED OF AFDC, BUT INELIGIBLE (1986)

Methodology:

1. First, we recorded the number of children in each county in families receiving AFDC benefits in 1986.

2. Then, we listed the number of children estimated to be poor in each county in 1984.
3. Next, we subtracted the number of children on AFDC in each county from the county's estimated number of poor children, the difference equaling the population of children in families which meet the financial criteria for AFDC, but are technically ineligible.
4. To calculate the percentage of children in each county who need AFDC benefits, we divided the number of children in need of benefits by the total number of children in the county.
5. We ranked each county's percentage as calculated in step #4 from 1 to 120 with a ranking of #1 assigned to the county with the lowest percentage of children needing benefits.

Sources:

1. "P.A. 264," July 1985 - June 1986, Cabinet for Human Resources, Department for Social Insurance.
2. "Children in Poverty, 1984," Kentucky Youth Advocates.
3. "1984 Population Estimates," Urban Studies Center, State Data Center.

WOMEN RECEIVING LATE OR NO PRENATAL CARE (1985)

Methodology:

1. We first recorded the number of live births to women residing in each county whose prenatal care or lack thereof was reported.
2. Next, we added the number of women in each county whose care was reported as late (after the first trimester) to those who received no prenatal care.
3. Then, we calculated by county the percentage of women who received late care or no care by dividing the number of women in this category by the total number of women whose prenatal care or lack thereof was reported.
4. Finally, we ranked each county's percentage of women reporting late or no care from 1 to 120. The county with the lowest percentage of women in the late or no care category was assigned a ranking of #1.

Source: "Resident Live Births and Stillbirths by Trimester Prenatal Care Began, Kentucky, Districts, and Counties, 1985," Cabinet for Human Resources, Bureau of Vital Statistics.

INFANT DEATHS (1981-85)

Methodology:

1. First, we recorded the number of live births to residents of each county from the years 1981 through 1985.
2. Next, we recorded the number of infant deaths for each county over the same time period.
3. Then, we expressed infant mortalities in terms of percentages by dividing the number of infant deaths, 1981-85, in a county by the

number of live births to county residents over the same years.

4. We ranked each county from 1 to 120 labeling the county with the lowest infant mortality rate #1.

Sources:

1. "Resident Live Births By Race By County, 1981, 1982, 1983, 1984," Cabinet for Human Resources, Bureau of Vital Statistics.
2. "Resident Live Births By Marital Status of Mother by Race of Child, Number and Crude Rate: Kentucky, Districts, and Counties, 1985," Cabinet for Human Resources, Bureau of Vital Statistics.
3. "Infant Mortality by Race, By County, Number and Rate, 1981," Cabinet for Human Resources, Bureau of Vital Statistics.
4. "Resident Birth-Related and Infant Deaths, by District and County, Number and Rate, Kentucky, 1982, 1983, 1984, 1985," Cabinet for Human Resources, Bureau of Vital Statistics.

NOTE: Infant mortalities are recorded in the county in which an infant dies. As a result, the county where a child died may be different from the infant's county of residence. While not exact, these figures provide the most accurate information available by county.

BABIES BORN TO TEENAGE MOTHERS (1985)

Methodology:

1. We began by recording the number of live births in each county in 1985.
2. Next, we computed the number of live births to teenagers for each county in the same year.
3. To compute the percentage of births to teens by county, we divided the number of live births to teens in each county by the total number of live births to all women residing in the county.

Sources:

1. "Table 1-J, Resident Live Births by Marital Status of Mother, by Race of Child, Number, and Crude Rate: Kentucky, Districts, and Counties, 1985," Cabinet for Human Resources, Bureau of Vital Statistics.
2. "Table 1-M, Resident Live Births by Race of Child and by Age of Teenage Mother, Number, and Percent: Kentucky, Districts, and Counties, 1985," Cabinet for Human Resources, Bureau of Vital Statistics.

PERCENTAGE OF TEENS GIVING BIRTH (1985)

Methodology:

1. First, we recorded the number of female teens residing in each county who were between 12 and 18 years of age in 1984. This figure should closely coincide with the 13 through 19 year old female population in 1985.

2. Then, we recorded the number of teenagers in each county who gave birth in 1985.
3. To compute the percentage of teenagers giving birth in each county, we divided the number of births to teens by the total number of female teens in each county.
4. Each county was ranked according to its percentage of teens giving birth. The county with the lowest percentage was assigned a ranking of #1.

Sources:

1. "Population Estimates, 1984," Department of Urban Studies, State Data Center.
2. "Table 1-M, Resident Live Births by Race of Child and by Age of Teenage Mother, Number and Percent: Kentucky, Districts, and Counties, 1985," Cabinet for Human Resources, Bureau of Vital Statistics.

Note: Females enrolled in colleges and universities are recorded by Urban Studies as residents of the county in which they are enrolled. Therefore, children of female college students are considered live births in the county in which the college is located.

CHILDREN ON MEDICAID (1986)

Methodology:

1. We began by recording the number of children in each county who were recipients of Medicaid services in 1986.
2. To determine the percentage of Medicaid recipient children in each county, we divided the number of child recipients by the number of children in the county.

Sources:

1. "P.A. 264," July 1985 - June 1986, Cabinet for Human Resources, Department for Social Insurance.
2. "Population Estimates, 1984," Urban Studies Center, State Data Center.

MEDICALLY INDIGENT CHILDREN (1986)

Methodology:

1. First, we recorded the number of children who were recipients of Medicaid in 1986 for each county.
2. Next, we recorded the number of poor children in each county.
3. Then, we subtracted the number of child recipients of Medicaid in each county from the number of poor children in the county. By this process we were able to estimate the number of children who were medically indigent in 1986.
4. To compute the percentage of medically indigent children in each county, we divided the number of medically indigent children by the total number of children in the county.

5. Then, we ranked each county in terms of its percentage of medically indigent children. We assigned a ranking of #1 to the county with the lowest percentage.

Sources:

1. "P.A. 264," July 1985 - June 1986, Cabinet for Human Resources, Department for Social Insurance.
2. "Population Estimates, 1984," Urban Studies Center, State Data Center.
3. "Children in Poverty, 1984," Kentucky Youth Advocates.

SUBSTANDARD DWELLINGS (1980)

Methodology:

1. First, we recorded the number of housing units in each county in 1980.
2. Next, we recorded each county's number of substandard units as defined by the federal government for the year 1980.
3. We arrived at the percentage of substandard units for each county by dividing the number of substandard housing units by the total number of units in the county.
4. Each county was ranked according to its percentage of substandard units. The county with the lowest percentage was assigned a rank of #1.

Source: "1980 Census of Housing," General Housing Characteristics, U. S. Department of Commerce, Bureau of the Census, August 1982.

**CHILDREN UNDER AGE 6
IN TITLE XX DAYCARE (1986)**

Methodology:

1. First, we recorded the number of children by county under age 6 enrolled in Title XX Daycare for the month of October 1986.
2. From population estimates for 1984, the latest year for which estimates are available, we then recorded the number of children under age 6 living in each Kentucky county.
3. We arrived at the percentage of children enrolled in Title XX Daycare in each county by dividing the number of children enrolled by the total number of children residing in the county under the age of 6.

Sources:

1. "Data Compiled by Community Coordinated Child Care Presented to the Human Resources Subcommittee of the Interim Appropriations and Revenue Committee," February 26, 1986.
2. "Population Estimates, 1984," Urban Studies Center, State Data Center.

CHILDREN UNDER AGE 6
POTENTIALLY NEEDING TITLE XX DAYCARE (1986)

Methodology:

1. First, we recorded the number of children under age 6 enrolled in each county in Title XX Daycare in October 1986.
2. Next, we estimated the number of poor children under age 6. We calculated this number by multiplying the number of children under age 6 in each county by the county's percentage of poverty in 1984.
3. We assumed that all poor children under age 6 would need subsidized daycare if their parents or guardians were employed. This assumption allowed us to determine the greatest number of children under age 6 who could need subsidized care.
4. We then subtracted the number of children enrolled in Title XX Daycare from the number of poor children under age 6.
5. To figure the percentage of children under age 6 in each county in need of Title XX Daycare, we divided the number of Title XX recipients by the total number of children under age 6.
6. Each county was ranked according to its percentage with the ranking of #1 assigned to the county with the lowest percentage of potential need.

Sources:

1. "Data Compiled by Community Coordinated Child Care Presented to the Human Resources Subcommittee of the Interim Appropriations and Revenue Committee," February 26, 1987.
2. "Population Estimates, 1984," Urban Studies Center, State Data Center.
3. "Children in Poverty, 1984," Kentucky Youth Advocates.

CHILDREN RECEIVING FOOD STAMPS (1987)

Methodology:

1. We began by recording the number of children residing in each county in 1984.
2. Then we recorded the number of food stamp recipients in each county birth through 20 years of age. No figures were available for the birth through 17 years of age group.
3. We computed the percentage of each county's recipients from birth through 20 years of age by dividing that number by each county's total population of children from birth through 17 years of age.

Sources:

1. "Food Stamps, Total Number of Entries in Each Age Category by County, January 1987," Cabinet for Human Resources, Department of Social Insurance, Systems Engineering Division, Human Services Branch.

2. "Population Estimates, 1984," Urban Studies Center, State Data Center.

Note: No effort was made to extract the 18-20 year old recipients as there are very few recipients in that age group.

CHILDREN NEEDING FOOD STAMPS (1987)

Methodology:

1. First we recorded the number of persons from birth through 20 years of age in each county who received food stamps in January 1987. No figures were available for the birth through 17 year old group.
2. Then we subtracted the number of food stamp recipients from birth through 20 years of age in each county from the number of poor children from birth through 17 years of age in the corresponding county. The remainder approximates the number of children from birth through 17 years of age in need of food stamp benefits.
3. To figure the percentage of children from birth through 17 years of age in each county who need food stamps, we divided the number in need in each county as calculated in step #2 by the county's total population of children from birth through 17 years of age.
4. We then ranked counties by percentages ranking the county with the lowest percentage #1.

Sources:

1. "Food Stamps, Total Number of Entries in Each Age Category by County, January 1987," Cabinet for Human Resources, Department of Social Insurance, Systems Engineering Division, Human Services Branch.
2. "Children in Poverty, 1984," Kentucky Youth Advocates.

Note: No effort was made to extract the 18-20 year old recipients as there are very few recipients in that age group.

FREE OR REDUCED SCHOOL BREAKFAST RECIPIENTS (1985)

Methodology:

1. We began by adding together each county's public and private school enrollees.
2. Then, we computed the number of free or reduced breakfasts served in each county for the school term 1984-85.
3. To calculate the average number of free or reduced breakfasts provided daily, we divided the total number of breakfasts served in each county in 1984-85 by 185, the number of school days in one year. This number is equal to the average number of daily free or reduced breakfast recipients.
4. To determine the percentage of student recipients, we divided the number of recipients in each county by the county's total school enrollment population.

270

Sources:

1. "Kentucky Public Schools, Membership Close of First Month, 1985-86," Kentucky Department of Education.
2. "Kentucky Non-Public Schools, Membership Close of First Month, 1985-86, Kentucky Department of Education.
3. "Commodity Report, October 1984-September 1985," Department of Education, School Food Services.

CHILDREN NEEDING FREE OR REDUCED SCHOOL BREAKFASTS (1985)

Methodology:

1. To estimate the number of children in need of free or reduced breakfasts, we first added the number of children enrolled in public schools to the number enrolled in private schools in each county.
2. To figure the number of students in need of free or reduced breakfasts, we multiplied the number of students in each county by the county's poverty rate.
3. We calculated the average number of children receiving free or reduced breakfasts by dividing the total number of free or reduced breakfasts served in each county for one year by 185, the number of school days in a school calendar year. That quotient is equal to the average number of children served daily.
4. Next, we subtracted the average number of recipients for each county as calculated in step #3 from the total number of children in need.
5. We then expressed this data reflecting need as a percentage by dividing the number of children in need by the number of students in each county.
6. Each county was ranked in terms of its percentage of need. The county with the lowest percentage was ranked #1.

Sources:

1. "Kentucky Public Schools, Membership Close of First Month, 1985-86," Kentucky Department of Education.
2. "Kentucky Non-Public Schools, Membership Close of First Month, 1985-86, Kentucky Department of Education.
3. "Commodity Report, October 1984 - September 1985," Department of Education, School Food Services.
4. "Children in Poverty, 1984," Kentucky Youth Advocates.

INFANTS AND CHILDREN ON WIC (1987)

Methodology:

1. First, we recorded the number of children and infants served in each county through the Women, Infants and Children (WIC) program in May of 1987.
2. Then, we added the number of births in each county for the years 1982-1986 to approximate the number of children age-eligible for

WIC. Children must be under five to be considered.

3. To estimate the percentage of children served through WIC in each county, we divided the number of child recipients by the county's population of children under 5.

Sources:

1. "Resident Live Births by Race by County, 1982, 1983, 1984, 1985, 1986," Cabinet for Human Resources, Bureau of Vital Statistics.
2. "Women, Infants, and Children (WIC) Program, Enrollment for Each Site, May 1, 1987," Cabinet for Human Resources, Department of Health Services, Division for Maternal and Child Health, Special Data Services.

INFANTS AND CHILDREN NEEDING WIC BENEFITS (1987)

Methodology:

1. First, we recorded the number of infants and children in each county who were served by the Women, Infants, and Children (WIC) program in May of 1987.
2. Next, we subtracted that number from a Cabinet for Human Resources' estimate of children potentially eligible for WIC benefits. The resulting figure represents the number of infants and children in each county who are potentially eligible for WIC, but who are not being served.
3. We computed each county's potential WIC need by dividing the number of child-recipients in each county by the county's 0 to 5 year old population.
4. Then, we ranked each county's percentage of need. The county with the lowest percentage was ranked #1.

Sources:

1. "Women, Infants, and Children (WIC) Program, Enrollment for Each Site, May 1, 1987," Cabinet for Human Resources, Department of Health Services, Division for Maternal and Child Health, Special Data Services.
2. "WIC Potentially Eligible, 6/83, by County and ADDs," Cabinet for Human Resources, Department of Health Services, Division for Maternal and Child Health, Special Data Services.

CHILD ABUSE ALLEGATIONS (1986)

Methodology: We recorded the number of cases of reported physical and sexual abuse for each county for 1986.

Source: "Child Abuse/Neglect Statistics, FY 1986," Cabinet for Human Resources, Department of Information Systems.

SUBSTANTIATED ABUSE ALLEGATIONS (1986)

Methodology:

1. First, we recorded the number of physical and sexual abuse reports in each county in 1986.
2. Then, we recorded the number of cases in each county of substantiated physical or sexual abuse.
3. Next, we calculated the percentage of abuse allegations that had been substantiated in each county by dividing the number of substantiated reports by the county's total number of reports.

Source: "Child Abuse/Neglect Statistics, FY 1986," Cabinet for Human Resources, Department of Information Systems.

PERCENT OF ABUSED CHILDREN IN COUNTY (1986)

Methodology:

1. We listed the number of cases in each county in which physical or sexual abuse of a child had been substantiated.
2. We calculated the percentage of abuse for each county by dividing the number of substantiated child abuse cases by the total number of children residing in the county.
3. We ranked each county by its percentage of abuse. The county with the lowest percentage of abuse was ranked #1.

Sources:

1. "Child Abuse/Neglect Statistics, FY 1986," Cabinet for Human Resources, Department of Information Systems.
2. "Population Estimates, 1984," Urban Studies Center, State Data Center.

CHILD NEGLECT ALLEGATIONS (1986)

Methodology: We recorded for each county the number of allegations of child neglect for 1986.

Source: "Child Abuse/Neglect Statistics, FY 1986," Cabinet for Human Resources, Department of Information Systems.

SUBSTANTIATED NEGLECT ALLEGATIONS (1986)

Methodology:

1. We began by recording the number of reports of neglect in each county for 1986.
2. Then, we recorded the number of cases in each county of substantiated neglect.
3. Next, we calculated the percentage of neglect allegations that had been substantiated in each county by dividing the number of

substantiated reports by the county's total number of reports.

Source: "Child Abuse/Neglect Statistics, FY 1986," Cabinet for Human Resources, Department of Information Systems.

PERCENT OF NEGLECTED CHILDREN IN COUNTY (1986)

Methodology:

1. We recorded the number of cases of substantiated child neglect in each county for 1986.
2. We calculated the percentage of neglect in each county by dividing the number of substantiated child neglect cases by the total number of children in the county.
3. We ranked each county by its percentage of neglect. The county with the lowest percentage of child neglect was ranked #1.

Sources:

1. "Child Abuse/Neglect Statistics, FY 1986," Cabinet for Human Resources, Department of Information Systems.
2. "Population Estimates, 1984," Urban Studies Center, State Data Center.

CHILDREN IN FOSTER CARE (1986)

Methodology:

1. For each county we recorded the number of children in foster care in 1986.
2. We divided the total number of children in care by the county's birth through 17 years of age population to derive the percentage of children in care in each county.
3. Then, we ranked each county's percentage from 1 to 120 assigning the county with the lowest percentage a ranking of #1.

Sources:

1. "Substitute Care Statistics By Origin County Active During 1986," Cabinet for Human Resources, Department of Social Services.
2. "Population Estimates, 1984," Urban Studies Center, State Data Center.

Note: Foster care figures include children in private care as well as foster homes.

PER PUPIL SPENDING (1985)

Methodology:

1. In each county in which there is only one school district, we divided the number of students by the county's total pupil

- expenditures to estimate the cost per pupil.
2. In counties in which there is more than one district, we added the total costs for all children in the county and divided that figure by the number of children in the county.
 3. Then, we ranked each county in terms of its expenditure per pupil. The county with the highest expenditure was ranked #1.

Sources:

1. "Kentucky Public Schools, Membership Close of First Month, 1985-86," Kentucky Department of Education.
2. "Kentucky Essential Skills Test, Statewide Testing Results, 1985," Kentucky Department of Education.

PERCENT OF NINTH GRADERS READING AT GRADE LEVEL (1985)

Methodology:

1. In counties in which there is only one school district, we recorded the percentage of ninth graders reading at grade level.
2. In counties in which there is more than one district, we multiplied the number of ninth grade students in each district by the district's percentage of ninth graders reading at grade level. Then we added the figures for each county's districts together and divided by the total number of ninth graders in the county.
3. Each county was then ranked. The county with the highest percentage of ninth graders reading at grade level was ranked #1.

Sources:

1. Kentucky Public Schools, Membership Close of First Month, 1985-86," Kentucky Department of Education.
2. "Kentucky Essential Skills Test, Statewide Testing Results, 1985," Kentucky Department of Education.

DROPOUTS (1985)

Methodology:

1. In counties in which there is only one school district, we recorded the number of students enrolled in the ninth grade in 1981.
2. In counties in which there is more than one district, we added together each county's district's total ninth grade population in 1981.
3. Then, we recorded the number of children in each county who graduated in 1985, four years later.
4. For each county we subtracted the number of 1985 graduates from their 1981 ninth grade enrollment figures. The resulting number represents the number of dropouts for each county in 1985.
5. We computed each county's percentage of dropouts by dividing its number of dropouts by its number enrolled in 1981.
6. We ranked each county's dropout percentage assigning the county

with the lowest percentage #1.

Source: "Holding Power and Graduates, May 1985," Kentucky Department of Education, Office of Research and Planning.

Note: As calculated, these figures do not take into account students who moved out of county between grades nine and twelve or who graduated more than four years after enrolling in ninth grade.

PERSONS 25 YEARS OR OLDER WITH HIGH SCHOOL DIPLOMA OR EQUIVALENCY (1980)

Methodology:

1. For each county we recorded the number of persons in 1980 who were 25 of age old or older.
2. Then, we listed the number of persons in each county who in 1980 had either completed high school or its equivalent.
3. To compute the percentage of each county's population of persons age 25 or older with a diploma or its equivalency, we divided the number of such persons by the number of persons in the county 25 years or older.
4. We ranked each county by percentage. The county with the highest percentage was ranked #1.

EMPLOYMENT (1980)

Methodology:

1. First, we recorded the number of 16 to 19 year olds in each county who were not enrolled in school in 1980.
2. For the same year and for each county we added the number of persons 16 to 19 years of age who were unemployed to those in the same age category who were not in the labor force. These two categories, "unemployed" and "not in the labor force" comprised our total figures for unemployed 16 to 19 year olds.
3. We arrived at the percentage of unemployed 16 to 19 year olds in each county by dividing the number of unemployed by the number of 16 to 19 year olds who were not enrolled in school.

KENTUCKY YOUTH ADVOCATES, INC.

Kentucky Youth Advocates operates as a non-profit, tax-exempt organization which serves the public independently. It does this by researching, publishing, and distributing information about current and emerging policies affecting Kentucky's children, especially Kentucky's poor or otherwise disadvantaged children. KYA tries to make government agencies accountable to the needs of these children by providing new analysis and information. KYA also monitors the quality of education that public schools provide to children. KYA functions as an independent analyst, critic, and problem solver. KYA's primary means of monitoring is to listen to children, their families, and agencies who are reluctant or unable to raise questions about existing policy.

Kentucky Youth Advocates, organized in 1975 and incorporated in 1977, receives financial support from philanthropic foundations, corporations, and private individuals. KYA conducts government-funded studies with the right to publish the results. In addition, KYA sells publications and charges for consultant services.

Kentucky Youth Advocates has offices in Louisville and Frankfort.
